

# DC/AC MicroProbe Model K110

The Model K110 has exceptional AC/DC current measurement capabilities. Very small and compact, this micro-probe is designed for accurate measurement of very low currents with  $50\mu\text{A}_{\text{DC}}$  sensitivity.

Its very small size and “clip” shape make it ideal for probing and measuring in tight wiring areas such as circuit boards, 4 to 20mA process loops or automotive electronic circuitry. Model K110 is an excellent companion to all DMMs and instruments that will benefit from the probe’s high sensitivity, dynamic range and waveform displaying characteristics.

The Model K110 provides higher sensitivity and better accuracy with an output of 10mV/mA. It provides AC + DC output signal proportional to the total current under test, without the need of probe ranging or signal filtering. True RMS measurements with total AC + DC components are possible.
