

Handheld IC Testers

Models 570A and 575A

Model 570A analog and model 575A digital IC testers are compact, handheld, battery powered testers offering advanced functionality and ease of use. The 2-line x 16 character dot matrix LCD shows the result of the test as a PASS or FAIL, together with individual pin diagnostics and test modes. Both units contain extensive built-in test libraries.

The 570A analog IC tester's built-in test library includes all common analog ICs including op-amps, comparators, voltage regulators, voltage references, analog switches and multiplexers, opto-isolators and opto-couplers, and audio ICs.

The 575A digital IC tester's built-in test library includes a broad range of TTL, CMOS, memory, LSI, interface and other IC devices of up to 40 pins.

Model 570A Features

- Auto identification mode
- Conditional/Unconditional loop testing mode
- Functional test unit emulates passive circuitry to implement a comprehensive test in a variety of configurations and gain settings
- Displays diagnostic information for individual component pins
- Built-in membrane keypad, 2 x 16 dot matrix alphanumeric LCD, and high quality 16-pin ZIF socket
- Battery operated

Model 575A Features

- Comprehensive device library covers most TTL, CMOS, memory, and interface devices
