temperature

JOFRA® calibration

» Wide temperature range
From -90 to 125°C (-130 to 257°F) with our patented heat piping technology.

» High accuracy
Down to ±0.07°C (±0.013°F) using the external reference sensor. 4-wire True-Ohm-Measurement technology is used

» Most stable cooler calibration on the market
±0.03°C (±0.054°F)

» Fastest calibration possible
The efficient free piston stirling cooler (FPSC) technology is used to secure fast cooling and heating temperature changes

» Easy to carry
Weighing only 15.2 kg (33.5 lb), the PTC-125 is by far the lightest and most portable cooler on the market

» Intelligent reference sensor communication
JOFRA reference sensors are supplied with intelligent plugs, holding the calibration data (coefficients) of the reference sensor. This is a truly plug & play calibration system

» USB connector for communication
All PTC calibrators communicate via an easy-to-use USB port

ISO 9001 Manufacturer

Specification Sheet, SS-PTC-125

Professional Temperature Calibrator
PTC-125 Cooler

Intuitive calibration

Reach -80°C in 75 minutes

The professional dry-block temperature calibrator – the JOFRA® PTC-125, is a versatile temperature calibrator available with a temperature range that makes it especially ideal for use in the health care, medical, pharmaceutical, biotechnology and food industries.

The PTC-125 offers many advantages, such as:

- **Relevant for many applications**
  With its wide temperature reach, the PTC-125 can be used in many applications where either high heat or low cooling is needed
- **User friendly**
  Intuitive to use and easy to run, the PTC-125 is equipped with a large informative, easy-to-read color display, which makes reading error a thing of the past
- **Ergonomically correct**
  Lightweight and easy-to-carry, the PTC-125 is easy to move from job to job
- **Mechanically stable**
  With its high-tech design the PTC-125 ensures durability and lasting quality

The PTC-125 is the newest member of the well-known JOFRA PTC family that can meet any type of industrial temperature calibration need within the -90 to +660°C (-130 to 1220°F) temperature range.

Standard features

Great temperature homogeneity

The PTC series of calibrators provides precision temperature calibration of sensors, whatever the type or format.

The JOFRA PTC-series features our well-known active dual-zone heating technology. Each heating zone is independently controlled for precision temperature calibration. The homogeneity in the lower part is close to that of a laboratory liquid bath. The lower zone ensures optimum heat dissipation throughout the entire calibration zone. The upper zone compensates for heat loss from the sensor-under-test and from the open top. This design also eliminates the need for extra insulation of sensors-under-test and makes it possible to calibrate any type of mechanical sensors.

Wide temperature range

The PTC-125 performs calibration over a wide temperature range starting from -90°C and up to 125°C (-130 to 257°F). The patented technology makes it possible to perform calibration of sensors in applications ranging from ultra-coolers to sterilization sensors (SIP).

Fastest temperature calibration

Time is money! This is why all the new PTC calibrators heat and cool faster than all other calibrators on the market. This saves you both in production downtime and general calibration costs.

NEW!
Plug & play

Intelligent reference sensor communication

The JOFRA STS-150 intelligent reference sensor contains all individual calibration data regarding the sensor.

This means that the time-consuming coefficient downloading sequence with risk of errors is no longer necessary. As well, the user can change the reference sensor and be up and running immediately.

With these intelligent reference sensors, AMETEK has eliminated a source of error and the system is now a fail-safe plug & play calibration system.

Intelligent recalibration information, IRI

In order to comply with ISO, SOP's and FDA, it is imperative that the calibration equipment never exceeds the expiry date of the calibration certificate. The PTC calibrator is, when switched on, constantly checking calibration dates on the calibrator as well as for the connected STS sensors. If the calibration period has expired, a warning will appear in the display. This feature prevents costly consequence evaluation.

USB connector for communication

Another PTC feature is the USB connection that facilitates easy communication with the calibration management software JOFRACAL. The USB connection also supports easy download of future firmware upgrades.

The USB connection provides fast and easy access to all laptops without the need for RS-232 to USB converters.

Future-proof through e.g. a flash capability for easy firmware upgrades as well as already integrated LAN communication, SD-card slot and USB host connectors.

Efficient cooling technology

The PTC-125 with both heating and cooling capabilities features the FPSC (Free piston stirling cooler) as the cooling source.

It is much more efficient than thermo-electric (Peltier) coolers.

Easy to read & user friendly

The new 5.7" full color VGA display is large, bright and very easy to read – even from a distance. The main temperatures, like SET, READ, TRUE and SUT (sensor-under-test), are always displayed at all stages of the programming or calibration procedure.

The navigation is menu-driven and very logical to use and the display shows important information needed for the current function in use. The communication window pops up and is followed by discrete sound messages.

The display contains detailed information at a glance, such as:
• Stability status
• Real time clock
• Serial number of reference sensor
• Sensor-under-test status
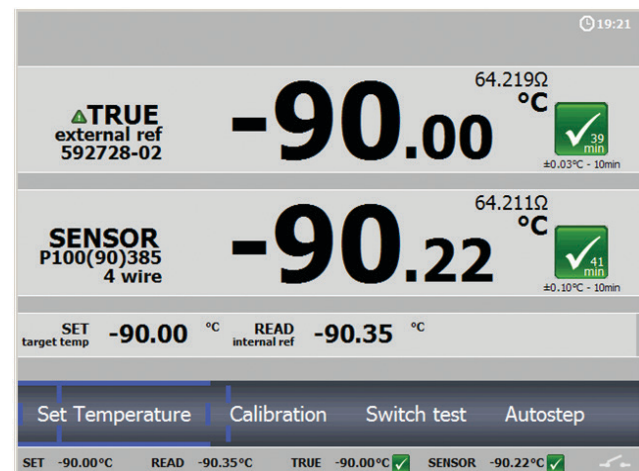

Easy to carry

A calibrator is carried from one job to another and therefore it needs to weigh as little as possible. AMETEK has designed the PTC calibrators to be lightweight and easy to carry, without compromising quality, durability or functionality.

The PTC-125 weighs only 15.2 kg, making it one of the lightest ultra coolers on the market.

SET-Follows-TRUE (Models B & C only)

The "SET-Follows-TRUE" mode makes the instrument tune in to the temperature reading of the external reference "TRUE" meets the desired "SET" temperature. This feature is important when it is critical that the temperature of the calibration zone matches the desired temperature when measured with accurate external reference sensors.

Reading of sensor-under-test (Model B only)

Model B is equipped with a built-in accurate measuring circuit for sensor-under-test (input), which enables measurement of virtually any type of temperature sensors including: Resistance thermometers (RTD), thermocouples (TC), transmitters, milliamps (mA) and thermostats.

PTC calibrators can be user-programmed from the keyboard for fully-automatic sensor calibrations. Once the unit is programmed, the instrument is self-operating and performs the configured calibration routine. All calibration data and results are stored and can be read on the display.

Switch test (Model B only)

Users may perform a thermoswitch test and find "Open", "Closed" and the hysteresis (deadband) automatically. The instrument retains the last 20 test results.

Auto stepping

Up to 20 different temperature steps may be programmed including the hold time for each step. Upon completion of an auto-step routine, the user can read the results for the sensor-under-test on the PTC display. Results from twenty auto-step calibrations can be held.

The "Set temperature" feature allows the user to set the exact desired temperature with a resolution of 0.01°C (0.002°F).

Instrument setups

The PTC series allows the user to store up to 10 complete instrument setups. You may store all types of information including temperature units, stability criteria, use of external reference sensors, resolutions, sensors-under-test (SUT), conversions to temperature, display contrasts, etc. The setup may be recalled at any time.

Maximum and minimum temperatures

From the setup menu, the user can select the maximum and minimum temperature limit for the calibrator. This function prevents damage to the sensor-under-test caused by excessive temperatures and it helps reduce sensor drift from exposure to too high temperatures. This feature can be locked with an access code.

Enhanced stability

A stability indicator shows when the PTC calibrator has reached the desired temperature and is stable. The user may change the stability criteria for the external reference and the sensor-under-test quickly and simply. The stability criterion is the user's security of a correct calibration. A count-down timer is displayed next to the temperature read-out.

Specially-designed carrying case

AMETEK has designed an all-in-one carrying case that makes it possible to store the STS reference sensor in the carrying case with optimal physical protection. There is room for inserts and insulation plugs to cover all sensor-under-test dimensions and compartments for the wires, manuals, certificates, plugs, insert tools, etc.

All compartments are specially designed to hold the above-mentioned items (5 inserts). This makes it easy to keep track of all your accessories.

For optimum protection of the calibrator and the accessories, the compartments are designed to hold the accessories firmly in place during transportation.

JOFRACAL calibration software

JOFRACAL is a highly versatile calibration software that is supplied together with the PTC calibrator. The software ensures easy calibration of all kind of temperature sensors, such as RTD´s, thermocouples, transmitters and thermoswitches. Furthermore, it can be used for pressure calibration i.e. pressure gauges and pressure switches.

In conjunction with JOFRACAL, PTC calibrators can:

- Operate as a stand-alone instrument, using advanced calibration routines without the assistance of a personal computer on site. The work order functionality
- Prevent unauthorized changes to a calibration routine. Personnel who are not authorized to alter a calibration routine cannot do so

Once all calibrations are completed, the data may be uploaded to JOFRACAL for printing of certificates. The data collected may be stored on the personal computer for later recall or analysis.

JOFRACAL offers extended output formats of the captured calibration data such as PDF file format and ASCII/semicolon separated text format for further processing and calculation of data in spreadsheets and word processors.

Free download at www.jofra.com

Optional features

Unique reference sensors

The STS-150 reference sensor is designed with a 90°-angled rod to fit the calibrator so it is only slightly higher than the top of the PTC calibrator.

The unique design makes it possible to calibrate threaded sensors and sensors with connection heads without any problems. STS-150 reference sensors also alert you when your calibration has expired.

Increased capacity with JOFRA ASM

Using the PTC series together with the ASM, Advanced Signal Multi-scanner, offers a great time-saving automatic solution to calibrate multiple temperature sensors at the same time. The ASM series is an eight channel scanner controlled by JOFRACAL software on a PC. Up to 3 ASM units can be stacked to calibrate up to 24 sensors at a time. It can handle signals from 2-, 3- and 4 wire RTD's, thermocouples, transmitters, temperature switches and voltage.

Sensor support rod

The support rod is lightweight and easy to mount on the PTC. Two fixing holes are integrated in the calibrator where the support rods can be mounted.

Multi-hole insert kits

Two special multi-hole insert kits have been developed to comply with calibration of almost any sensor diameter without having to buy numerous inserts.

The first kit is a metric insert kit consisting of four inserts covering all diameters from 3 to 13 mm. The other is an imperial insert kit consisting of three inserts covering six different sizes from 1/8" to 7/16".

All inserts have holes for STS reference sensors.

Optional PTC firmware package, U1

Optional feature for B model only. See Option U1 in ordering code.

The PTC calibrator can be supplied with additional functionality.

1. Engineering units in display
2. Work order functionality
3. Additional sensor under test input types*

*Pt10(90)385, Pt50(90)385, Pt200(90)385, Pt500(90)385, Pt50(90)391, M50(90)428, M100(90)428, Pt100 Mill and YSI-400

Upon buying the User Interface functionality, U1, the following three capabilities are enabled.

Documenting temperature calibrator

Optional feature for B model only. See Option U1 in ordering code.

The PTC calibrator can store calibration procedures and may be taken out to the process site without bringing a personal computer.

This allows the PTC calibrator to:

• Operate as a stand-alone instrument, using advanced calibration routines without the assistance of a personal computer on site. This is the work order functionality

• Prevent unauthorized changes to a calibration routine. Personnel who are not authorized to alter a calibration routine cannot do so

Once all calibrations are completed, the data may be uploaded to the JOFRACAL for printing of certificates. The data collected may be stored on the personal computer for later recall or analysis.

As found/As left

Optional feature for B model only. See Option U1 in ordering code.

On the B model you can, when running a calibration initiated from a work order, select the calibration as an As Found or an As Left calibration.

Calibration of indication devices

Optional feature for B model only. See Option U1 in ordering code.

When calibrating the B model an indicating device in the work order mode, users may key in the results during or after the test. Using the "Calibration info" function, the user may view the complete calibration task, including the "Scenario" before the calibration takes place.

Traceable certificate - input performance for sensor-under-test inputs		•	
Test cables (2 x red, 2 x black)		•	

ORDERING INFORMATION

Order number	Description
	Base model number
PTC125	PTC-125 series, -90˚C to 125˚C (-130˚F to 257˚F)
	Model version
A	Basic model, without input
B	Full model, incl. Reference sensor input, Sensor-under-test input
C	Middle model, incl. Reference sensor input
	Power supply (US deliveries 60 Hz only)
115	115VAC
230	230VAC
	Mains power cable
A	European, 230V
B	USA/Canada, 115V
C	UK, 240V
D	South Africa, 220V
E	Italy, 220V
F	Australia, 240V
G	Denmark, 230V
H	Switzerland, 220V
I	Israel, 230V
	Insert type and size
NON	No insert selected (standard)
UNX	1 x Undrilled Insert (Please see Insert selection for code)
XXX	1 x Single hole insert (Please see Insert selection for code)
MXX	1 x Multi hole insert (Please see Insert selection for code)
SIX	Set of 3 Imperial multi hole inserts. Covering holes from 1/8" to 7/16"
SMX	Set of 4 Metric multi hole inserts. Covering holes from 3mm to 13mm
SIM	Set of 9 Imperial inserts. Covering holes from 1/8" to 5/8"
SMM	Set of 14 Metric inserts. Covering holes from 3mm to 16mm
	User Interface Functionality
U1	Complete functionality package - workorders, Full Sensor-Under-Test types, Engineering units (B model only)
	External Reference sensor (B & C models only, optional)
R16	STS-150 Ref. sensor. Dia. 4mm. Length 192mm (STS150A912EH)
	Calibration Certificate
F	Traceable Certificate to International Standards (standard)
H	Accredited Certificate - ISO17025
EA	Full EURAMET Accredited Certificate - ISO17025
HS	System Calibration - Accredited Certificate - ISO17025 (B & C model only)
EAS	System Calibration - Full EURAMET Accredited Certificate - ISO17025 (B & C model only)
	Accessories
CT	Solid Protective Carrying case with trolley * Carrying case included in stadard delivery
TR	Solid Protective Carrying case with trolley & Support rod set
	Sample order number
PTC125 B 230 A SMX U1 R16 EA TR	JOFRA PTC-125 B with 230VAC, EU power cord, set of metric inserts, User Interface functionality, STS-150 ref. sensor, full EA temp. calibration certificate, and carrying case with trolley & support rod

ACCESSORIES

125066	Extra fixture for sensor grip
125067	Extra sensor grip
122771	Mini-Jack connector for stable relay output
120516	Thermocouple Male Plug - Type J - Black
120517	Thermocouple Male Plug - Type K - Yellow
120514	Thermocouple Male Plug - Type N - Orange
120515	Thermocouple Male Plug - Type T - Blue
120518	Thermocouple Male Plug - Type R / S - Green
120519	Thermocouple Male Plug - Type Cu-Cu - White

AMETEK Test & Calibration Instruments
A business unit of AMETEK Measurement & Calibration Technologies Division offering the following industry leading brands for test and calibration instrumentation.

JOFRA Calibration Instruments
Temperature Calibrators
Portable dry-block calibrators, precision thermometers and liquid baths. Temperature sensors for industrial and marine use.
Pressure Calibrators
Convenient electronic systems ranging from -25 mbar to 1000 bar - fully temperature-compensated for problem-free and accurate field use.
Signal Instruments
Process signal measurement and simulation for easy control loop calibration and measurement tasks.

M&G Dead Weight Testers & Pumps
Pneumatic floating-ball or hydraulic piston dead weight testers with accuracies to 0.015% of reading. Pressure generators delivering up to 1,000 bar.

Crystal Pressure
Digital pressure gauges and calibrators that are accurate, easy-to-use and reliable. Designed for use in the harshest environments; most products carry an IS, IP67 and DNV rating.

Lloyd Materials Testing
Materials testing machines and software that guarantees expert materials testing solutions. Also covering Texture Analysers to perform rapid, general food testing and detailed texture analysis on a diverse range of foods and cosmetics.

Davenport Polymer Test Equipment
Allows measurement and characterization of moisture-sensitive PET polymers and polymer density.

Chatillon Force Measurement
The hand held force gauges and motorized testers have earned their reputation for quality, reliability and accuracy and they represent the de facto standard for force measurement.

Newage Hardness Testing
Hardness testers, durometers, optical systems and software for data acquisition and analysis.
