3801

■ The 3801 meets a variety of measurement and analysis needs.

In addition to basic functions such as measuring AC/DC voltage and current, frequency, capacitance, resistance, diode checking, and continuity checking, the 3801 features functions such as an AC + DC mode, temperature measurement, and pulse output. DC voltage measurements are accurate to within $\pm 0.06\%$ rdg. ± 3 dgt. (in the 4000 count mode), assuring accurate measurement for all types of electrical equipment checks. Display can also be switched to the high-resolution 40000-count mode.

For details on 3801 functions, see page 4.

■ The 3802 provides the same high accuracy with simpler functions.

The 3802 is a low-price model that features a simplified selection of 3801 functions, performing basic measurement of voltage and current, resistance, frequency, capacitance, diode checking, and continuity checking.

■ The 3801 and 3802 both feature dual displays.

● Two different parameters can be displayed simultaneously.

AC voltage, frequency and so forth can be displayed simultaneously with other parameters for quick verification.

3804

■ The economically priced 3803.

This economically priced Model 3803 features measurement of AC/DC voltage and current, resistance, diode checking, and continuity checking. The unit also conforms to CAT III 600 V standards, and has been designed with ample consideration for safety by adopting a 600 V fast blow fuse in the current input connector.

■ The versatile 3804 adds recording and capacitance.

In addition to the capacitance measurement function, the 3804 is an all-purpose unit that comes with handy auxiliary functions, such as max/min/average value recording and relative value display for analyzing measured data.

The 3805 features true RMS measurement, providing greater utility for facility maintenance

3805

■ True RMS system supports measurement of harmonic wave.

A true RMS system accurately measures harmonic wave components generated by inverters and provides the following functions in addition to frequency and temperature measurement.

● For instrument maintenance ... 4-20mA % display (possible with the 3804)

Displays 4mA as 0.00% and 20mA as 100.0% - useful for intuitively grasping deflection of instrument meters.

● Power supply voltage waveform distortion check ... harmonic wave percentage display

Can display proportion of non-sinusoidal waves superimposed on sine waves that do not include any harmonic waves as a percentage from 0.0 to 99.9%. The higher the displayed percentage, the greater the harmonic wave component. This helps identify and avoid potential harmonic interference in advance. ● Usable with voltages ranging from AC 100 mV to 1000 V. (The 3805 meets CAT III 600 V requirements and CAT II 1000 V requirements. Please follow appropriate precautions according to the place of use.)

● HVAC/ R maintenance ... simultaneous 2-point temperature measurement (see page 6)

Model	3803	3804	3805	3802	3801

Models 3801 to 3805 have been designed with emphasis on safety.

Models 3801 to 3805 bear CE markings and conform to standards such as the IEC61010-1 international safety standard and EMC related standards. Further, these handy units have been designed with an emphasis on safety, and come equipped with a standard 600 V fast blow fuse in the current connector and a cushioned holster that provides protection against shock in the event of accidental droppage.

Overvoltage category (CAT)

In order to promote the safe use of measuring instruments, safety level standards are classified under IEC60664 into overvoltage categories CAT I through IV, depending on the location where the instrument is to be used. Categories with a higher number indicate an electrical environment that has high levels of instantaneous energy. Therefore, a measuring instrument designed for CAT III can endure higher instantaneous energy than an instrument designed for CAT II. The 3801 to 3805 are rated as CAT II at 1000 V and as CAT III at 600 V.

CATII: Primary electrical circuits in equipment connected to a wall outlet via a power cord.

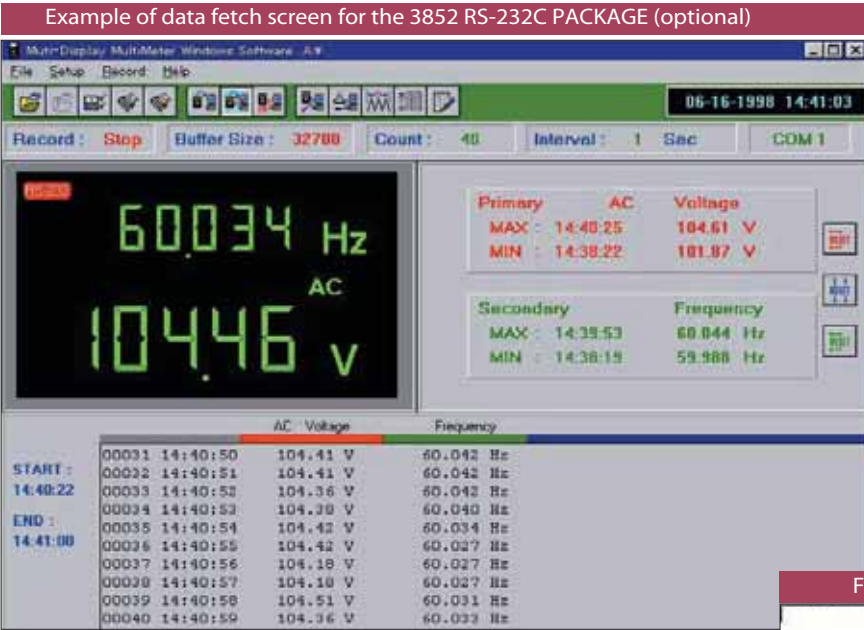

CATIII: Circuits between primary and distribution panels and outlets in equipment that reads electricity from the direct distribution panel via electrical reads (fixed equipment).

■ The 3805 is ideal for maintenance of refrigerating systems and air conditioners

■ Simultaneous measurement of temperatures at two points

Temperatures may be measured simultaneously at two points by thermocouple (K or J type); (with the display switchable between the two measurements). Further, 2-point temperature differences (Δt) can be displayed, making the unit ideal for measuring temperature differences such as those between the air conditioner's cooling unit (liquid) and air outlet (gas).

Thermocouple	Range	Resolution	Meter accuracy
K	-40°C~850°C	1°C	±0.3%rdg.±3°C
	-40°F~1562°F	1°F	±0.3%rdg.±6°F
