

# POWER QUALITY ANALYZER PW3198

Record and Analyze Power Supply Problems Simultaneously with a Single Unit

# The New World Standard for Power Quality Analysis

#### Never Miss the Moment

- Detect power supply problems and perform onsite troubleshooting
- Do preventive maintenance to avert accidents by managing the power quality

### **CAT IV-600V Safety Standard**

- Meets the CAT IV safety rating required to check an incoming power line
- Safe enough to measure up to 6,000Vpeak of transient overvoltage

#### **Easy Setup Function with PRESETS**

- Just select the measurement course, wiring, and clamps
- Automatic one-step setup based on measurement conditions

#### Compliant with International Standards

- International power quality measurement standard IEC 61000-4-30 Edition 2 Class A
- High precision with a basic voltage measurement accuracy of 0.1%

#### AC FLEXIBLE CURRENT SENSOR

The number of power supply problems is increasing as power systems are becoming more and more complicated - all due to the rising use of power electronics devices plus a growing installed base of large systems and distributed power supplies. The quickest way to approach these problems is to understand the situation quickly and accurately. The PW3198 Power Quality Analyzer is ready to effectively solve your power supply problems.

# **Troubleshooting**

- Understand the actual power situation at the site where the problem is occurring (e.g., the equipment malfunction, failure, reset, overheating, or burning damage).
- Ideal for troubleshooting solar and wind power generation systems, EV charge stations, smart grids, tooling machines, OA equipment (e.g., computers, printers, and UPS), medical equipment, server rooms, and electrical equipment (e.g., transformers and phase-advancing capacitors).

# Field Survey and Preventive Maintenance

- Perform long-term measurements of the power quality and study problems that are difficult to detect or that occur intermittently.
- ✓ Maintain electrical equipment and check the operation of solar and wind power generation systems.
- Manage the parameters with a control set point, such as a voltage fluctuation, flicker, and harmonic voltage.

# Power (Load) Survey

#### International Standard IEC61000-4-30 Edition 2 Class A

Class A is defined in the international standard IEC61000-4-30, which specifies compatibility with power quality parameters, accuracy, and standards to enable comparison and discussion of the measurement results of different measuring instruments.

The PW3198 is compliant with IEC61000-4-30 Edition 2 Class A standard. The instrument can perform measurements in accordance with the standard, including continuous gapless calculation, methods to detect events such as dip, swell, and instantaneous power failure, and time synchronization using the optional GPS box.

### CAT IV-600V Safety

The PW3198 is compliant with the measurement category CAT IV - 600V and can also safely test the incoming lines for both single-phase and three-phase power supplies.

## Easy to set up - Just select the measurement course and the PW3198 will do the rest

Simply choose the course based on the measurement objective and the necessary configurations will be set automatically.

U Events	Record voltage and frequency and detect errors simultaneously.
Standard Power Quality	Record voltage, current, frequency, and harmonic, and detect errors simultaneously.
Inrush current	Measure the inrush current.
Recording	Record only the TIME PLOT Data but do not detect errors.
EN50160	Perform measurements in accordance with EN50160.

#### Highly Accurate, Broadband, Wide Dynamic Range Makes for Reliable Measurements

#### Voltage Measurement Range

Both low and high voltages can be measured in a single range.

## Voltage Frequency Range

Wide range from DC voltage to 700 kHz

#### Basic Measurement Accuracy (50/60 Hz)

Voltage	±0.1% of nominal voltage			
Current ±0.2% rdg. ±0.1% f.s. + Clamp-on sensor accurace				
Power	±0.2% rdg. ±0.1% f.s. + Clamp-on sensor accuracy			

World's highest level of basic measurement accuracy. Extremely accurate voltage measurement without the need to switch ranges.

# Transient Overvoltage

Transient overvoltage can also be measured The PW3198 is the first power in a range between the maximum 6,000 V and minimum 0.5 µs (2 MS/s).

#### High-order Harmonic

quality analyzer that can measure the high-order harmonic component of up to 80 kHz.

8715 Mesa Point Terrace San Diego, CA 92154 Toll Free: 1.866.363.6634 Tel: 1.619.429.4545 Fax: 1.619.374.7012 Email: sales@calright.com http://www.calright.com

The Right Source For Your Test & Measurement Needs

The PW3198 can measure all waveforms of power, harmonic, and error events simultaneously. When a problem occurs with the equipment or system on your site, the PW3198 will help you detect the cause of the problem early and solve it quickly. You can depend on the PW3198 to monitor all aspects of your power supplies.

# Measure All Parameters at the Same Time

#### Acquire the Information You Need Quickly by Switching Pages (RMS Value)

Just connect to the measurement line, and the PW3198 will simultaneously measure all parameters, such as power and harmonic. You can then switch pages to view the needed information immediately.

#### **DMM Display**

Display parameters such as voltage, current, power, power factor, and integral power in a single window.

Waveform Display

Display the voltage and current waveforms on channels 1 to 4 one above the other in a single window.

4-channel Waveform Display

Display the voltage and current waveforms on channels 1 to 4 individually.

Vector Display

Display the measured value and vector of the voltage and current of each order harmonic

Switch windows

with one touch

Harmonic Bar Graph Display

Display the RMS value and phase angle of harmonics from the 0th order to the 50th either in a graph or as numerical values.

## Reliably Detect Power Supply Failures (Event)

To detect power supply failures, measurement does not need to be performed multiple times under different conditions. The PW3198 can always monitor and reliably detect all power supply failures for which detection is enabled.

#### Transient Overvoltage (Impulse)

A transient overvoltage is generated by a lightning strike or a contact fault or closed contact of a circuit breaker and relay, and often causes a steep voltage change and a high voltage peak.

#### Voltage Dip (Voltage Drop)

Voltage drops for a short time as a result of large inrush current generated in the load by, for example, a starting

#### Interruption

The power supply stops instantaneously or for a short or long time because electrical power transmission is stopped as a result of a lightning strike, or because the circuit breaker is tripped by a power supply short

#### Frequency Fluctuations

An excessive increase or decrease of the load causes the operation of a generator to become unstable, resulting in frequency fluctuations.

#### Harmonic

Harmonic is generated by a semiconductor control device installed in the power supply of equipment, causing distortion of voltage and current waveforms.

#### Voltage Swell (Voltage Rise)

A voltage swell is generated by a lightning strike or a heavily loaded power line being opened or closed, causing the voltage to rise instantaneous-

#### Inrush Current

A large current flows instantaneously at the moment electrical equipment, a motor, or similar devices are powered on.

#### High-order Harmonic

Voltage and current waveforms are distorted by noise components generated by a semiconductor control device or the like installed in the power supply of electronic equipment.

#### Unbalance

An increase or decrease in the load connected to each phase of the three-phase power supply or an unbalanced operation of equipment and devices causes the load of a particular phase to become heavy so that voltage and current waveforms are distorted, voltage drops, or negative phase sequence voltage is generated.

## TIME PLOT Data

#### TIME PLOT Recording of All Parameters

The PW3198 can simultaneously record 8,000 or more parameters, such as voltage, current, power, power factor, frequency, integral power, harmonic, and flicker, at the specified recording interval. The PW3198 never fails to capture the peak because it performs calculations continuously and records the maximum, minimum, and average values within the recording interval

#### **Event Waveforms**

## Capture up to 55,000 Instantaneous Waveforms of Power Supply Failures

The PW3198 can record up to 1,000 instantaneous waveforms of power supply failures (up to 55,000 when repeat recording is set to ON) while performing TIME PLOT recording.

#### Event List

This list records instantaneous waveforms of power supply failures (events), such as a voltage drop or inrush current, along with the time or other information. Events are always monitored, regardless of the recording interval of the TIME PLOT recording

The PW3198 lets you view the instantaneous waveform (200 ms) of a power supply failure in the window.

#### RMS value changes over 30 seconds

When a voltage drop or inrush current occurs, RMS value changes are recorded over 30 seconds simultaneously. This function can also be used to check the voltage drop caused by inrush current generated by the start of the motor.

Use Model 9624-50 PQA-HiVIEW PRO (version 2.00 or later) with a PC to analyze the data collected by the PW3198.

#### Viewer Function

Display and analyze the data recorded by the PW3198 POWER QUALITY ANALYZER.

#### **Report Creation Function**

Automatically and effortlessly create rich reports for compliance and record management.

Report output items: Voltage/current RMS value fluctuation graph, harmonic fluctuation graph, inter-harmonics fluctuation graph, flicker graph, integral power graph, demand graph, total harmonic voltage/current distortion rate list, EN50160 window (Overview, Harmonic, Measurement Results Category), worst case, transient waveform, maximum/minimum value list, all event waveforms/detailed list, and setup list

#### **Print Examples**

All Event Detailed List

TIME PLOT Recording of Parameters

EN50160

#### Other Functions

#### **CSV Conversion of Measurement Data**

Convert data in the range specified in the TIME PLOT window into CSV format and then save for further processing. The 9624-50 can also convert event waveforms into CSV format. Open CSV data using any commercially available spreadsheet software for advanced data management and analysis.

## Even Analyze Data Recorded with Models 3196 and 3197 PQAs

Data recorded with the HIOKI 3196 and 3197 Power Quality Analyzers can also be analyzed.

#### Download Measurement Data via USB/LAN

Data in the SD memory card inserted in the PW3198 can be downloaded to a PC via USB or LAN.

#### EN50160 Display Function

EN50160 is a power quality standard for the EU. In this mode, evaluate and analyze power quality in accordance with the standard. You can display the Overview, Harmonic, and Measurement Results Category windows.

#### 9624-50 Specifications

Delivery media	CD-R
Operating environment	AT-compatible PC
OS	Windows10, Windows8, Windows7
Memory	512 MB or more

# Useful Functions for a Wide Variety of Applications

#### Large Capacity Recording with SD memory card

Data is recorded to a large capacity SD memory card. The data can be transferred to a PC and analyzed using dedicated application software. If your PC is not equipped with an SD memory card slot, simply connect a USB cable between the PW3198 and the PC. The PC will then recognize the SD memory card as removable media.

Repeat record	Recording period
OFF	Max. 35 days Reference value: ALL DATA (all items recorded), repeat recording OFF, and TIME PLOT interval 1 minute or longer)
ON	Max. 55 weeks (about 1 year) Reference value: ALL DATA (all items recorded), repeat recording ON (1 week x 55 times), and TIME PLOT interval 10 minutes or longer)

#### Remote Measurement Using HTTP Server Function

You can use any Internet browser to remotely operate the PW3198, plus download the data stored in the SD memory card using dedicated software (LAN access required).

Conduct off-site remote control with a tablet PC using a wireless LAN router

#### **GPS Time Synchronization**

The PW9005 GPS BOX lets you synchronize the clock on the PW3198 to the UTC standard time. Eliminate time differences between multiple PQAs and correctly analyze measurement data taken by several instruments.

#### Simultaneously Measure Three-phase Lines and Grounding Wire

Apart from the main measurement line, you can also measure the AC/DC voltage on another line using Channel 4.

#### Yes! Simultaneously!

- ·Measure the primary and secondary sides of UPS
- •Two-line voltage analysis
- •Measure three-phase lines and grounding wire
- ·Measure neutral lines to detect short circuits
- •Measure the input and output of a DC-AC converter for solar power generation

#### An Assortment of Clamp-on Sensors Covers a Broad Range of Measurements

In addition to current sensors for measuring 100A AC, 500A AC, 1000A AC and 5000A AC rated currents, a 5A AC sensor is also available. In addition, HIOKI's CLAMP ON LEAK SENSORS enable you to accurately measure for leakage current down to the mA level, while the new CT7700 AC/DC AUTO-ZERO CURRENT SENSOR further widen applications by supporting DC current testing.

#### Backup and Recovery from Power Failure

The PW3198 uses the new large capacity BATTERY PACK Z1003, enabling continuous measurement for three hours even if a power failure occurs. In addition, a power failure processing function restarts measurement automatically even if the power is cut off completely during measurement.

#### Other Measurement Applications

#### Flicker measurement

Measure flicker in conformance with IEC 61000-4-15 Ed2. Phase voltage check for  $\Delta$  connection

Use the  $\Delta$ -Y and Y- $\Delta$  conversion function to measure phase voltage using a virtual neutral point.

400 Hz line measurement

Measure at a power line frequency of 50/60 Hz as well as 400 Hz.

#### The power supply of the office equipment sometimes shuts down

Survey Objective

The power supply of a printer at the office shuts down even though it is not operated. Equipment other than the printer can also sometimes perform a reset unexpectedly.

#### easurement Method

Setup is very easy. Just install the PW3198 on the site, and measure the voltage, current, and power. To troubleshoot, just select the clamp-on sensor and wiring, and then select the

Voltage Fluctuation Graph

Analysis Report

No failure occurred during the measurement period, but a periodic voltage drop was confirmed. The voltage drop may have been caused by the periodic start and operation of the electrical equipment connected to the power supply line. Equipment, such as a laser printer, copier, and electrical heater, may start themselves periodically due to residual heat. An instantaneous voltage drop is likely to have been caused by inrush current from equipment that consumes a large amount of power.

## Medical equipment malfunctions

Survey Objective
Replacing the equipment with a new one by the service provider did not improve the malfunction. A survey of the power supply was required to clarify the cause.

#### easurement Method

Select the "U Events" course in the PW3198 in the same way as with the office equipment example.

Voltage and Current Waveforms at the Time Voltage Dip Occurs

#### nalysis Report

A It was determined that a voltage dip (voltage drop) occurred and impacted the operation of the equipment. If a voltage dip occurs every day on a regular basis, the probable cause is the start of a large air-conditioning unit, pump, heater, or similar equipment.

## Surveying a Solar Power Generation System

# Survey Objective

- Maintain a solar power generation system and check its operation (verify the power quality)
- Troubleshoot (impact on the peripheral equipment, operation shutdown, etc.)

#### easurement Method

Set up the PW3198 on the site and measure the voltage, current, and power. To survey the power quality, select the "Standard power quality measurement" course in the PRESETS menu. To

measure the DC voltage, connect channel 4 to the primary side of the solar panel

Example of Voltage Waveforms at the Time of Line Switching

Analysis Report
All parameters can be recorded simultaneously with a single measurement.

- Identify changes in the output voltage of the power conditioner
- Presence or absence of the occurrence of a transient overvoltage
- Frequency fluctuation important for system interconnection
- Identify changes in the harmonic voltage and current included in the output
- Power (AC), integral power (AC), etc.

PRESETS function	U Events : Record and monitor voltage elements and frequency, plus detect events Standard Power Quality : Record and monitor voltage and current elements, frequency, and harmonics, plus detect events Inrush Current : Measure inrush current (basic voltage measurement required) Recording : Record only trend data, no event detection EN50160 : Measure according to EN50160 standards
Real-Time Clock function	Auto-calendar, leap-year correcting 24-hour clock
Display Language	English, Simplified Chinese, Japanese
Real-time clock accuracy	±0.3 s per day (with instrument on, 23°C±5°C (73°F±9°F)
Power supply	AC ADAPTER Z1002 (12 VDC, Rated power supply 100VAC to 240VAC, 1.7Amax, 50/60Hz) BATTERY PACK Z1003 (Ni-MH 7.2VDC 4500 mAh)
Maximum rated power	15VA (when not charging, except AC adapter), 35VA (when charging, except AC adapter)
Continuous battery operation time	Approx. 180 min. [@23°C (@73.4°F), when using <b>BATTERY PACK Z1003</b> ]
Recharge function	BATTERY PACK Z1003 charges regardless of whether the instrument is on or off; charge time: max. 5 hr. 30 min. @23°C (@73.4°F)
Power outage processing	In the event of a power outage during recording, instrument resumes recording once the power is back on (integral power starts from 0).
Power supply quality measure- ment method	IEC61000-4-30 Ed.2 :2008, IEEE1159 EN50160 (using Model PQA-HiVIEW PRO 9624-50)
Dimensions	Approx. 300 W× 211 H × 68 D mm (11.81" W × 8.31" H × 2.68" D) (excluding protrusions)
Mass	Approx. 2.6 kg (91.7 oz.) (including battery pack)
Accessories	Instruction manual, Measurement guide, VOLTAGE CORD L1000 (8 cords, approx. 3 m each: 1 each red, yellow, blue, and gray plus 4 black; 8 alligator clips: 1 each red, yellow, blue, and gray plus 4 black), Spiral Tube, Input Cable Labels (for identifying channel of voltage cords and clamp-on sensors), AC ADAPTER Z1002, Strap, USB cable (1 m length), BATTERY PACK Z1003, SD MEMORY CARD (2GB) Z4001

External control interface	Connector External event input			block el (at falling edge of 1.0 V or less and when shorted) betwe rated voltage: -0.5 V to +6.0 V	een GND terminal and EVENT IN terminal				
	External event output	:	External event output item setting	Operation	Pulse width				
			Short pulse output	TTL low output at event generation between [GND] terminal and [EVENT OUT] terminal	Low level for 10 ms or more				
			Long pulse output	TTL low output at event generation between [GND] terminal and [EVENT OUT] terminal (No external event output at START event)	Low level for approx. 2.5 s				
			ΔV10 alarm	TTL low output at ΔV10 alarm between [GND] terminal and [EVENT OUT] terminal	Low level while alarm occurring ; reverts to high at data reset				

## Environment and safety specifications

Operating environment	Indoors, altitude up to 3000 m (measurement category is lowered to 600 V CAT III when above 2000m), Pollution degree 2					
Storage temperature and humidity	-20 to 50°C (-4 to 122°F) 80% RH or less (non-condensating) (If the instrument will not be used for an extended period of time, remove the battery pack and store in a cool location [from -20 to 30°C (-4 to 86°F)].)					
Operating temperature and humidity	0 to 50°C (32 to 122°F) 80% RH or less (non-condensating)					
Dust and water resistance	P30 (EN60529)					
Maximum input voltage	Voltage input section 1000 VAC, DC±600 V, max. peak voltage ±6000 Vpeak Current input section 3VAC, DC±4.24V					
Maximum rated voltage to earth	Voltage input terminal 600 V (Measurement Categories IV, anticipated transient overvoltage 8000 V)					
Dielectric strength	6.88 kVrms (@50/60 Hz, 1 mA sense current): Between voltage measurement terminals (U1 to U3) and voltage measurement terminals (U4) 4.30 kVrms (1 mA@50/60 Hz, 1 mA sense current): Between voltage input terminal (U1 to U3) and current input terminals/interfaces Between voltage (U4) and current measurement terminals, and interfaces					
Applicable standards	Safety EN61010 EMC EN61326 Class A, EN61000-3-2, EN61000-3-3					

TIME PLOT: The MAX/MIN/AVG of each recording interval for each parameter are recorded.

EVENT: When a power anomaly occurs, approx. 200ms instantaneous waveform is recorded.

TRANSIENT: When a transient overvoltage is detected, the 2ms instantaneous waveforms before and after the occurrence (total 4ms) are recorded.

**FLUCTUATION**: The RMS fluctuation 0.5s before and 29.5s after an event has occurred are recorded.

HIGHORDER HARN : When a high order harmonic event occurs, the 40ms instantaneous waveform is recorded.

HIGH-ORDER HARM: When a high ord

	RMS current refreshed each half-cycle: RMS current is calculated using current waveform data sampled every half-cy
	200kHz
1 0 1 7	RMS voltage refreshed each half-cycle : 600.00V, 0.01V
	RMS current refreshed each half-cycle : Based on clamp-on sensor in use; see Input specifications
Measurement accuracy	RMS voltage refreshed each half-cycle : ±0.2% of nominal voltage (With 1.666% f.s. to 110% f.s. input and a nominal input voltage of at least 100 V
	±0.2%rdg.±0.08%f.s. (With input outside the range of 1.666% f.s. to 110% f.s. or a nominal input voltage of less than 100 \
	RMS current refreshed each half-cycle : ±0.3% rdg.±0.5%f.s. + clamp-on sensor accuracy
well/ Dip/ Interruption	FLUCTUATION
	Swell : Swell height, Swell duration
	Dip : Dip depth, Dip duration
	Interruption : Interruption depth, Interruption duration
	Swell : A swell is detected when the RMS voltage refreshed each half-cycle exceeds the threshold in the positive direction  Dip : A dip is detected when the RMS voltage refreshed each half-cycle exceeds the threshold in the negative direction
	Interruption : An interruption is detected when the RMS voltage refreshed each half-cycle exceeds the threshold in the negative direction
lange and accuracy	See RMS voltage refreshed each half-cycle
rush current	FLUCTUATION
	Maximum current of RMS current refreshed each 1/2 cycle
	Detected when the RMS current refreshed each 1/2 cycle exceeds the threshold in a positive direction
	See RMS current refreshed each half-cycle
, ,	·
RMS voltage, RMS current	TIME PLOT EVENT
	RMS voltage: RMS voltage for each channel and AVG (average) RMS voltage for multiple channels RMS current: RMS current for each channel and AVG (average) RMS current for multiple channels
Aggeurgment method

Clamp-on sensor	AC FLEXIBLE CURRENT SENSOR CT9667-01	AC FLEXIBLE CURRENT SENSOR CT9667-02	AC FLEXIBLE CURRENT SENSOR CT9667-03
Appearance	Sec. CE		
Primary current rating	500A AC, 5000A AC (selectable)		
Output voltage	500 mV AC f.s.		
Measurement range	See input specifications		
Amplitude accuracy *	±2.0%rdg.±0.3%f.s. *		
Phase accuracy *	±1° or less *		
Maximum allowable input *	10000 A continuous *		
Maximum rated voltage to earth	CATIII 1000 Vrms CATIV 600 Vrms		
Frequency characteristics	±3dB or less for 10 Hz to 20kHz (within ±3dB)		
Cord length	Sensor to circuit: 2m (6.56ft), Circuit to connector: 1m (3.28ft)		
Measurable conductor diameter	Max. φ100mm (3.94")	Max. φ180mm(7.09")	Max. φ254mm(10.0")
Dimensiona Mass	Circuit box: 35W (1.38") × 120.5H (4.74") × 34D (1.34") mm		
Dimensions, Mass	Sensor cable diameter: $\phi$ 7.4 mm(0.29")		Sensor cable diameter: φ13 mm (0.51")
Mass	280g (9.9 oz.)		470 g (16.6 oz.)
Power supply	LR6 alkaline battery x2, AC Adapter (option), or external 5 to 15 V DC power supply		
Options (sold separately)	AC ADAPTER 9445-02 (universal 100 to 240VAC, 9V/1A output/for USA) AC ADAPTER 9445-03 (universal 100 to 240VAC, 9V/1A output/for Europe)
